Customer Problem Statement

The Customer Problem Statement helps identify the user's needs, challenges and expectations. Understanding the customer's point of view enables the development of an AI-powered solution that accurately evaluates financial situations and provides personalized debt relief strategies and negotiation assistance.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An individual struggling with multiple loans and high debt.	Find the best way to reduce my total debt through relief options.	Existing platforms only show loan details and payment reminders.	They do not provide AI-based analysis or personalized debt relief suggestions.	Stressed and overwhelmed about my financial situation.
PS-2	A borrower facing financial difficulties.	Negotiate a better settlement with lenders.	Manual negotiations take time and I don't know the right approach.	I lack guidance and insights on effective negotiation strategies.	Frustrated and unable to get a fair settlement.
PS-3	A working professional managing finances.	Improve my financial health and plan for the future.	I don't have a clear view of my financial standing and repayment capacity.	There is no intelligent tool to analyze my financial profile holistically.	Uncertain about my future and financial stability.

Institution	Outcomes using intelligent assessment methods.	Methods focus only on written performance.	Conceptual understanding and communication skills.	Identify learning gaps and provide targeted improvements.
Financial Institutions / Banks / NBFCs	To reduce loan defaults and improve recovery rates using AI insights.	Traditional systems rely on static rules and manual reviews.	They lack tools to understand borrower intent and negotiation behavior.	Need AI-driven insights to identify risks early and suggest optimal actions.
