| Data Flow Diagram

The Data Flow Diagram (DFD) illustrates how information flows within the AI Powered Debt Relief & Financial Recovery Platform. It represents the interaction between users, system processes, data stores, and external services for generating settlement recommendations and negotiation support.

| DFD Symbol Legend

Symbol	Name	Description
	External Entity	Represents users or external systems that interact with the platform (e.g., Borrower, Lender, Credit Bureau).
	Process	Represents system processes or functions that transform input data into output.
	Data Store	Represents databases or data repositories where information is stored (e.g., User DB, Loan DB, Settlement DB).
	Data Flow	Represents the flow of information between entities, processes, and data stores.

| Description

The workflow starts when the borrower registers and inputs loan and financial details. The system stores and retrieves user data from the User Database. The AI Analysis Engine evaluates the financial profile, repayment capacity and market trends to generate insights. It accesses the Loan Database for loan information. Based on the analysis, the Settlement Recommendation module creates the best settlement plan. The Negotiation Support module then generates personalized negotiation letters and strategies, which are sent to the lender. External services like credit bureaus provide additional credit data to enhance recommendations. Finally, all settlement activities are stored in the Settlement Database for tracking and reporting.
